Skills Development Assessment

W07 Final Project | Rubric Evidence - Open Gallery

STUDENT	**OGWAL ALLAN**
PROJECT	Open Gallery - shared art search for the AIC and The Met
LIVE APP	https://allan2468coder.github.io/wdd330-sleepoutside/open-gallery/
SOURCE	GitHub source folder
TRELLO	Smookie - Open Gallery project board

Project summary

Open Gallery is a responsive art-discovery app built with semantic HTML, CSS, and vanilla JavaScript ES modules. It searches the public collections of the Art Institute of Chicago and The Metropolitan Museum of Art, normalizes their different JSON response shapes, dynamically renders artwork cards, and supports detail pages and saved works.

RUBRIC	MAX	EST.	EVIDENCE	LOCATION
1. JavaScript	25	**25**	Search validation and submission; independent asynchronous provider requests using Promise.allSettled; dynamic rendering of cards from JSON; sorting and pagination; details; favorite state; stale-request protection; and loading/error/empty states.	main.js; artworks.js; detail.js
2. Third-party APIs	25	**25**	Two museums and four endpoint types: AIC artwork search and artwork detail; Met collection search and individual object detail. Records link back to their museum sources.	artworks.js; AIC and Met official API documentation
3. JSON	10	**10**	Each artwork normalizes into 12 properties: id, museum, title, artist, date, medium, image, record, publicDomain, department, dimensions, and credit. Arrays of these records are rendered in results and favorites.	artworks.js; OpenGallery.test.js
4. Advanced CSS	10	**10**	Entrance keyframe animations for hero copy, hero artwork, and result cards; transitions and hover transforms for artwork images/favorite buttons; responsive grids; visible focus; and reduced-motion handling.	styles.css
5. Events	10	**10**	More than five event types: submit, click, change, image error, pageshow, and storage events, including suggested search, paging, sort, and favorite interactions.	main.js; detail.js; favorites-page.js
6. LocalStorage	5	**5**	Serializes and retrieves full artwork records with multiple properties; supports save, remove, clear, validation of stored JSON, and favorite counts across pages.	favorites.js; OpenGallery.test.js

RUBRIC	MAX	EST.	EVIDENCE	LOCATION
7. Trello Board	5	**5**	The public Smookie project board shows W5 setup/API/search, W6 details/favorites, and W7 testing/deployment/accessibility cards in Done with completed checklist counts at verification.	Public board link above; trello-progress.md
8. Video	10	**0**	No recording link is included yet. To earn these points, record about five minutes, show your face at the beginning, demonstrate the live app and code, publish publicly, and add/test the URL.	Pending student recording: [Add public video URL after recording]

Estimated project evidence score: 90 / 100 before the video is provided. The first seven criteria are supported by current project/source/board evidence; the video criterion is currently scored zero because recording and public-link evidence are still pending. This is an estimate, not an instructor grade.

Testing and deployment evidence

• Seven Jest tests pass for data normalization, AIC pagination, Met concurrency limits, API failure handling, and favorites storage.

• The project lint script passes, as do normal Vite and GitHub Pages production builds.

• The public GitHub Pages app, home/detail/favorites routes, and JS/CSS assets were verified; a live search returned artwork cards.

Submission checklist

• Confirm the spelling/order of the student name and review all first-person statements.

• Record/publish the video and replace the placeholder URL above.

• Use the official WDD 330 skills document template if Canvas/instructor requires it; transfer this rubric evidence into its required fields.

• Test app, source, board, and video links while signed out, and upload the final document to Canvas.

Prepared from the current project evidence. The video placeholder is intentional and must be replaced before final submission.
